

# Rainbow Fish

---

*Some of the fish that live here in the sea,  
Are just as beautiful as can be.  
Others are strange looking, that's a fact.  
They all need each other in their habitat.*

## Grades K-3

**Time: 25 minutes**

### Objectives:

The students will be able to: state that fish come in a variety of shapes, sizes, and colors.

### Materials:

Rainbow Fish book, colored pencils, glue sticks, sequence, fish pictures for each participant.

### Procedure:

1. Read the story Rainbow Fish to the group.
2. Give each child a coloring page of a fish provided in the pack and some of the colored pencils. Ask them to color their fish.
3. When they have finished each student gets a sequence (representing a scale) for their fish.

### Did you know?

*Under the blue-green surface of the waters of Biscayne National Park are some of the most colorful habitats on earth. It truly is a "spectrum of life". The fish here come in all shapes, sizes, and colors. Most of the underwater creatures depend on each other for protection, food, or other means necessary for survival. Just like Rainbow Fish sharing his beautiful scales perhaps we could share with others how special this place is.*
